

## **NyaySetu AI - Legal Assistance for Every Citizen**

The Challenge: India's legal system is strong, but inaccessible to the common citizen. The challenge is not the absence of laws, but the difficulty in understanding, affording, and navigating them.

Low Legal Literacy - Complex legal language makes it hard for citizens to understand rights, laws, and procedures, especially in rural and semi-urban areas.

Limited Access to Legal Help - Legal help is costly and scarce, while existing legal aid resources are insufficient to meet population-scale demand.

Error-Prone Procedures - Drafting documents like RTIs, Affidavit is manual and unforgiving, small mistakes lead to delays or rejection.

Lack of Timely Legal Awareness - Citizens struggle to stay updated with new laws, amendments and regulations, often relying on outdated information.

Without a reliable, intelligent legal assistant, citizens spend excessive time navigating legal uncertainty, make avoidable mistakes, and often fail to exercise their rights effectively - resulting in delayed justice, financial loss, and reduced trust in the legal system.
